Annotation. *The HIV epidemic is becoming one of the most urgent health issues in Russia and in the world. Every six seconds another person becomes HIV-positive. As a result of the epidemic, the number of HIV-positive people requiring medical, psychological and social support is rapidly growing. Taking into consideration the special needs of HIV-positive staff and students allows the educational system to become adaptive and accessible for all categories of people, specifically those with special needs.*

Keywords: HIV infection, socially significant diseases, education for HIV Prevention, HIV prevention.
