The article considers the reasons for the reduction of the number of small enterprises in Russia and deterioration of the quality indicators of their functioning. Small business has a capacious innovative potential, efficient use of which must ensure the formation of a competitive environment in the economy of the Russian Federation. The mismatch of goals of the actual state development formed a problem, possible ways of solution of which were suggested to be considered: improving the regulatory framework and the system of motivation for innovation activity, formation of national innovation system and its subsystems, the development of adaptive mechanism of management innovations.

Keywords: *innovative entrepreneurship, problems and ways of development.*
